## 7. SmartMall eCommerce Functions

### ECommerce: Tafari Mall

This is part of e-commerce section that deals with all the products that are sold by the businesses that are registered on Tafari.

**Search:**

The user is able to Search by business Name, Brand Name, Product Name and Product Category.

**Filters:**

The user can filter by Product Category, Price, Availabilty and Business Name

**Product category:**

When you land on the page, you will see a list of product categories that you can select and navigate to the products in that category.

**Business:**

When you filter by business, you will see a list of businesses that you can select and navigate to the products of that particular business.

### ECommerce: Cart

This is part of the E-commerce that deals with the Purchase process.

**Add to Cart:**

A user should be able to add a product to the Cart. If the user selects the Cart link, they should be able to see all the products that have not yet checked out.

**Manage Cart:**

The card icon will have a notification number showing the number of items in the cart.

When a cart has items in it

The user should be able to:

- Delete an item
- Increase/Decrease the quantity of any of the Items from 1 item to total items in stock.

When a cart has no products the cart link is disabled.

**Check Out:**

- When the user clicks the button, they will be required to enter their desired delivery address.
- The user will then be redirected to a payment page where they can pay for their products using own account or Tafari pay.
- The user will receive feedback to confirm if the purchase was successful and the delivery date.

## 8. Account Transactions

### Transactions

**Transactions are linked to the accounts. The latest 10 transactions are often displayed with the Account shown.** The user can expand or search transactions by clicking on the "view more transactions" link/button.

**Transaction Categories:**

All transactions should be categorised.

**Transaction Tagging:**

Transactions can be tagged in order to manage spending patterns

### Tafari Pay

**This is a payment management section where Businesses and Customers will perform their financial transactions.**

**Landing:**

When you land on the page you will see 2 sections:

- Pay Money
- Receive Money

**Pay Money:**

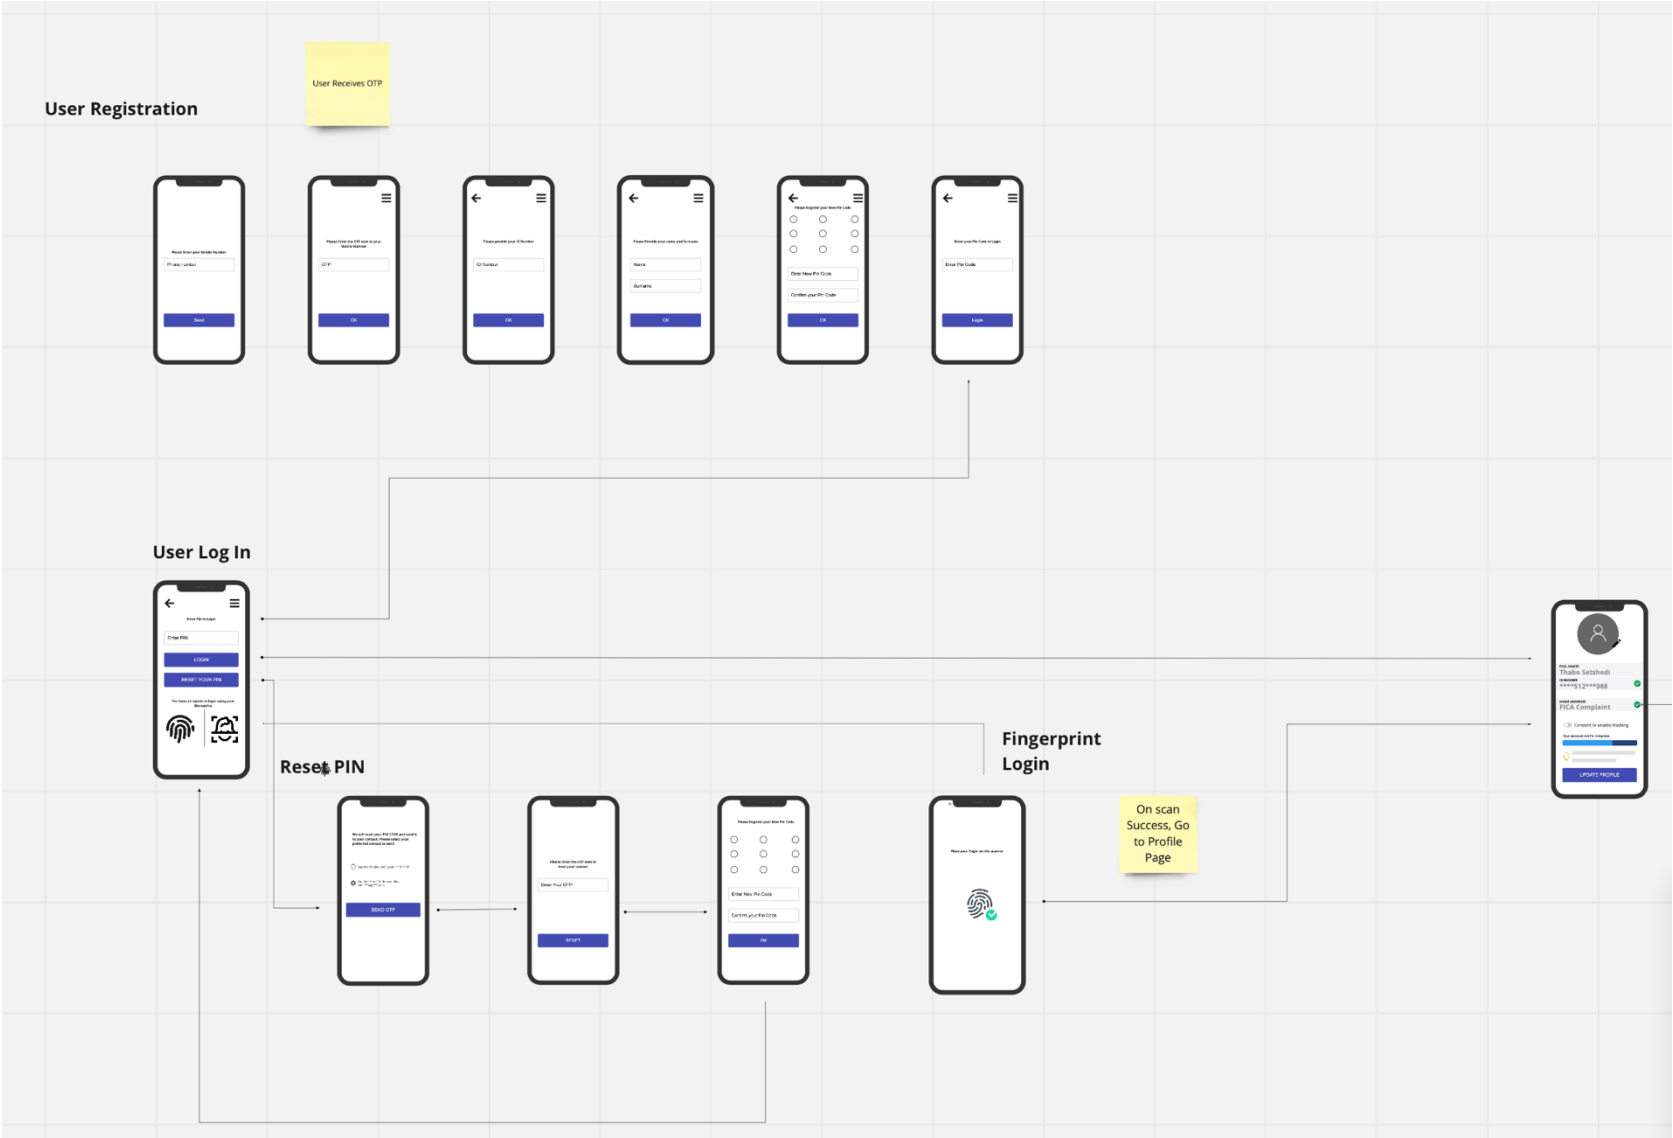

- The customer can scan the QR code to pay money to a business.
- The customer can pay the business using their external bank cards.
- The customer can pay using their Tafari Accounts.

**Receive Money:**

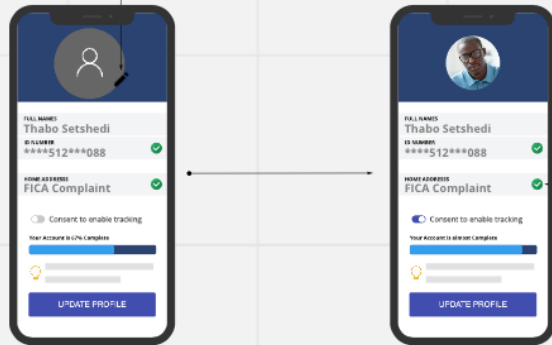

- The business can send a 'request to pay' to the customer manually (Product Details and Amount) via mobile number, email or both.
- The business can send a 'request to pay' by sending the customer a QR code.
- The Customer will receive the request and pay the money using their Tafari Accounts or External accounts.
- The business will accept payments from customers.
